

# MARIJUANA FACTS

**JOHNNY'S**  
AMBASSADORS

## CANNABIS

In botany, the cannabis plant is defined as a "genus" with different species below it. The cannabis plant has hundreds of different chemicals called "cannabinoids."

## MARIJUANA

is a variety of cannabis that contains greater than .3% THC and is used to make drugs. Delta-9-THC comes from marijuana and is psychoactive.

## THC

is a tetrahydrocannabinol (THC) is the most common cannabinoid in the cannabis plant. It is psychoactive, meaning it gives a "high" feeling.

## HEMP

is a variety of cannabis that contains less than .3% THC and is used to make paint, rope, and paper. Delta-8-THC can be created chemically.

## CBD

is a cannabidiol (CBD) is the second most common cannabinoid in the cannabis plant. It is not psychoactive on its own.

**WHY ARE THE TERMS 'CANNABIS' AND 'MARIJUANA' NOT INTERCHANGEABLE?**
